Cisco Intersight Adoption Services

Logicalis helps consolidate IT teams, technology, and operations—no matter where they are—for full-stack visibility, enabling them to work smarter, faster, and seamlessly together.

Once upon a time, IT infrastructure was managed by onsite teams that lived in traditional data centers. But no more. Today's work-from-home models mean that IT teams often work remotely, layering complexity on top of complexity and creating a digital beast that must be tamed. They must deliver stellar digital experiences at the same time that ever modern applications increasingly creep into on-premises, edge, and hybrid cloud environments. They must support existing infrastructure while managing next-generation workloads in an always-on, hyper-distributed world. And they must do it all—faster, better, and more efficiently—while reducing costs.

These demands are creating a growing gap between meeting the requirements of diverse environments and the expertise, processes, and tools needed to support them. Even if IT teams return to the office, these distributed "IT everywhere" operations must be singularly managed to maximize productivity, enable blanket security, and cut costs.

Logicalis can help you consolidate IT teams, technology, and operations—no matter where they are—into one secure and automated digital place that provides full-stack visibility. In this intelligent land, everyone works smarter, faster, and seamlessly together to anticipate issues and optimize performance.

Time-saving, risk-managing, cost-reducing cloud operations platform

Cisco Intersight is the time-saving, risk-managing, cost-reducing cloud operations platform that meets the changing world of work head on. Tame your complex, distributed IT environment via a consolidated dashboard that provides an intelligent view into your infrastructure. Automate server, fabric, storage, and provisioning with unified policies and third-party hardware support, enabling you to derive maximum value from your IT investments.

To assist with operations, Intersight "learns" from the entire installed base. Using predictive analytics and machine learning, information is synthesized and presented in an easily consumable, actionable format through the recommendation engine. Analyze, update, fix, and automate your environment in newfound ways for significant savings and faster application delivery in support of new business initiatives.

Plus, Intersight is connected directly to the Cisco Technical Assistance Center (TAC) to energize support, eliminate manual steps, and end delays. You'll be alerted to problems at the same time that log files are shared with TAC, enabling Cisco to provide recommended solutions. With information flowing seamlessly between Intersight and your IT teams, you can globally manage and support your Cisco infrastructure on your schedule.

Simplified IT operations and automated, policy-based configuration

Intersight provides all the benefits of SaaS delivery with full lifecycle management of Intersight-connected servers and third-party storage across data centers, remote sites, branch offices, and edge environments.

Pair Intersight with Cisco Unified Computing System (UCS) and power not just traditional workloads, but the latest apps with your hybrid cloud infrastructure. Or add Intersight to Cisco HyperFlex for robust, yet simplified hyperconvergence for any app, anywhere. Either way, you can integrate NetApp, Pure, and Hitachi storage solutions with UCS or HyperFlex and manage it all from the consolidated Intersight dashboard.

Associate a model-based configuration to automatically provision servers, storage, and fabric. Using profiles, IT teams can consistently align policy, server traits, and workloads. Create policies once for consistent, more simplified server deployments, improving productivity and compliance and reducing the risk of misconfiguration.

Benefits

- **Simplified operations** – Automate anything, anywhere, across mutable and immutable infrastructure, to simplify day-to-day IT operations.
- **Anywhere management** – Get the convenience of a SaaS platform with the ability to manage infrastructure from anywhere using a browser or mobile app.
- **Proactive resolution** – Stay ahead of issues and proactively accelerate trouble resolution through advanced support capabilities.
- **Universal view** – Get global visibility of infrastructure health and status, along with advanced management and support capabilities.
- **Innately extensible** – Add services beyond infrastructure, such as Intersight Workload Optimizer to manage more than Cisco servers and hyperconverged infrastructure and Intersight Virtual Appliance to connect endpoint devices.

Services

Cisco Intersight Adoption Services

This service provides an up to 8-hour engagement delivered via Logicalis and NterOne, a Cisco Digital Solutions Integrator. Logicalis and NterOne will work closely with you to stand up a Cisco Intersight instance in your environment and integrate it with Cisco UCS, Cisco HyperFlex (both include the Intersight Base license), and NetApp, Pure Storage, and Hitachi storage solutions. The service includes:

- Perform Cisco Intersight overview and activation
- Integrate supported solutions
- Provide in-depth review
- Configure/Demo Intersight Workload Optimizer and Intersight Assist (part of Cisco Intersight Virtual Appliance) to help you add devices to Intersight

If you would like to inquire more about **Cisco Intersight** please contact your Logicalis Account Executive.
